

SIHL INTRODUCES NEW 3550 ClearSOL WetCling Film

PRODUCT ANNOUNCEMENT

Dear Sihl Customer,

Sihl is excited to announce the introduction of the newest addition to the Sihl product lineup: 3550 ClearSOL WetCling Film! ClearSol WetCling Film is an extreme clear film designed for window graphics. You print on it, spray the window with water, position the image, squeegee it and you have a terrific window graphic with no adhesives, no release liners, no damage to tinted windows. When it's time to remove the graphic, peel it off with no residue even months after application.

3550 ClearSOL WetCling is a polyester film with excellent dimensional stability and unlike vinyl films will not shrink at all. The adhesive activates when sprayed with water and squeegeed onto glass, plexiglass, or any other smooth surface where only the graphic is to be seen. ClearSOL WetCling is easy to apply and easy to remove. For additional detail see the application guide at http://www.sihlinc.com/support_and_downloads/instruction_guides.html

3550 ClearSOL WetCling is compatible with Latex inks, solvent and eco-solvent inks and UV curable inks for incredible bright and vivid window graphics. It is available now in the following sizes:

36" x 100' on a 3" core

42" x 100' on a 3" core

54" x 100' on a 3" core

Order your 36"x20' sample roll right away to experience the ease of Sihl's new 3550 ClearSOL WetCling Film. Call your regional sales rep, Sihl customer service toll-free at 1-800-556-6866 or order directly on the website at www.sihlinc.com

Warm regards,

Your Sihl team
