

SIHL INTRODUCES New Twilight™ Latex Backlit Film

PRODUCT ANNOUNCEMENT

Dear Sihl Customer,

Choosing the right backlit film can be tricky. Let's be honest. The most important aspects when choosing a backlit film are density, density, and density. Regardless of whether your graphic is going inside or outside, whether it is large or small, mounting to plexiglas or "sandwiching" between two layers, you want your blacks to be dark, your colors vibrant and your graphic flat.

SiHL 3152 - Twilight™ Latex Backlit is an 8 mil, front-print, polyester backlit film designed exclusively for the high temperature and ink requirements of HP Latex printers. The super absorbent, matte, inkjet coating provides instant dry times and ultra wide color gamut. The advanced diffusion layer eliminates hot spots and shadow areas, creating a perfectly illuminated backlit display.

Best of all, you are going to like the price!
So go ahead and turn on the lights with new Sihl 3152 - Twilight™ Matte Backlit Film.

PRINT

SiHL Twilight™ combines maximum ink loading and extremely fast dry times to produce excellent print quality and color gamut. SiHL Twilight™ is Ideal for backlit displays, window graphics or other illuminated installations. Select "backlit" mode on the printer front panel and "HP Premium Vivid Color Backlit" in the software RIP of your choice for perfect "plug and play" results every time.

FINISH

The SiHL Twilight™ coating is minimally water and scratch-resistant. For added durability or a change of surface finish, Twilight™ can be laminated with either pressure sensitive or heat activated films.
