

SIHL INTRODUCES NEW ColorMAX™ MATTE PAPER

PRODUCT ANNOUNCEMENT

Dear Sihl Customer,

Tired of matte papers that won't dry, cockle through to the backside or coalesce in high ink areas? Look no further. We call it **MAX** for a reason!

Sihl Digital Imaging has developed a premium matte paper that can tackle your inkload, drytime and shadow detail requirements for your most demanding applications and customers. **3143 ColorMAX™** is a bright white, matte paper with a super absorbent instant dry matte coating for use with aqueous inkjet printers on the most demanding applications.

PRINT

ColorMAX™ combines maximum ink loading and extremely fast dry-times for unparalleled density and color gamut. A bright white, matte finish gives excellent contrast and depth with "plug and play" results when selecting standard "enhanced matte" or "heavyweight coated paper" mode on most printers.

Visit www.sihlusa.com for the onboard print settings for Epson, Canon, HP and other leading brands of inkjet printers.

FINISH

The unique **ColorMAX™** coating is sufficiently water and scratch-resistant. For added durability or a change of surface finish, **ColorMAX™** can be laminated with either pressure sensitive or heat activated films.

BUY

3143 **ColorMAX™** Matte Paper is in stock and available for immediate shipment.

Roll Sizes: 24", 36", 42", 50", 60" by 100' length, 2" core.

Call 1-800-366-7393

Sincerely,

Sihl Digital Imaging Team
